

Business Requirement Document

A Business Requirement Document (BRD) is usually created during project initiation and is often prepared jointly by business stakeholders, business analysts, and data analysts. In many analytics projects, the data analyst maintains and updates the analytics-related sections because they translate business needs into measurable data requirements.

Here is an industry-standard BRD template maintained by a data analyst.

Business Requirement Document (BRD)

Project Information

Project Name: Sales Performance Analytics Dashboard

Client Name: ABC Company

Prepared By: Data Analyst Teja S

Date: 10/07/2026

Version: 1.0

1. Project Overview

Purpose

Develop an interactive Power BI dashboard to analyze Amazon sales performance, revenue trends, customer purchases, and business KPIs for better decision-making.

2. Business Problem Statement

The client lacks a centralized dashboard to monitor sales performance. Manual reporting makes it difficult to identify sales trends, top-performing categories, regional performance, and channel performance.

3. Business Objectives

Objectives of the project:

- Monitor total sales and orders.
- Analyze monthly sales trends.
- Compare year-over-year sales performance.

- Identify top-performing categories and regions.
- Provide interactive filtering using slicers.

4. Scope of Project

In Scope

Sales performance analysis

Monthly sales trend analysis

Year-over-Year (YoY) sales comparison

Category-wise sales analysis

Region-wise sales analysis

Channel-wise sales analysis

KPI dashboard development

Interactive filtering using Year, Region, Category, and Channel slicers

Out of Scope

- Sales forecasting
- Customer recommendation system
- Machine learning or predictive analytics
- Real-time data integration
 - External market analysis

5. Stakeholders

Stakeholder	Role	Responsibility
Client Manager	Business Owner	Project approval
Sales Manager	End User	Requirement validation

Data Analyst	Teja S	Data analysis and reporting
BI Developer	Teja S	Dashboard creation

6. Data Requirements Data

Source Amazone Sales

Database Sales transaction

Customer Database Customer information

Product Database Product details

Required fields:

- Customer ID Order ID
- Order Date
- Customer ID
- Category
- Region
- Channel
- Quantity
- Sales Amount
- Year (derived from Order Date)

7. Key Performance Indicators (KPIs)

Total Sales Amount

Total Orders

Total Quantity

Average Order Value

Previous Year Sales

Year-over-Year (YoY) Growth %

Monthly Sales Trend

8. Functional Requirements

1. Display KPI cards.
2. Display monthly sales trend.
3. Display sales by category.
4. Display sales by region.
5. Display sales by channel.
6. Allow filtering by Year, Region, Category, and Channel.
7. Support interactive dashboard filtering.

9. Non-Functional Requirements

- Dashboard should load within 5 seconds.
- Reports should be easy to understand.
- Data accuracy should be maintained.
- Dashboard should be responsive and interactive.
- Data should be refreshed when new data is available.

10. Assumptions and Constraints Assumptions:

- Source data is available and complete.
- Order Date is valid.
- Sales Amount and Quantity are accurate after data cleaning.

- Users have access to Power BI.

Constraints:

- Historical data is limited to 2024–2026.
- Analysis is based only on the provided dataset.
- No real-time data refresh.

11. Deliverables

- Business Requirement Document (BRD)
- Raw Dataset
- Cleaned Dataset
- Power BI (.pbix) Dashboard
- Project Report (Documentation)
- Dashboard Screenshots

12. Approval
